

## SENIOR ROADS AND DRAINAGE ENGINEER

DRM Consulting Engineers is seeking an experienced and motivated Senior Roads and Drainage Engineer to join our Roads and Drainage team in Edinburgh/Dunfermline.

This is an excellent opportunity for a technically strong and commercially aware engineer to take a leading role in delivering infrastructure projects and supporting the continued growth of the team. The successful candidate will contribute to project leadership, client engagement, and the mentoring and development of engineers and technicians.

### The Role:

Our Roads and Drainage team provides infrastructure solutions for residential and private-sector developments across Scotland. Working collaboratively with other disciplines, we deliver integrated solutions across a diverse portfolio of multi-disciplinary projects, including residential, retail, and industrial developments from pre-planning through to construction.

Key responsibilities include:

- Lead and manage infrastructure projects ranging from small developments to large-scale schemes.
- Undertake detailed design and prepare contract drawings for roads, drainage, site levels, and earthworks from feasibility through to construction.
- Review and approve designs, drawings, and documentation to ensure quality, compliance, and alignment with client expectations.
- Coordinate with clients, regulators, local authorities, and multidisciplinary project teams.
- Attend design and site meetings and carry out site inspections as required.
- Prepare project bids, fee proposals, and technical submissions.
- Provide technical leadership, mentoring, and guidance to engineers and technicians within the team.

IMS Document  
(IMS/FRH053/1)

## **About You**

The ideal candidate will have:

- A degree or HND in Civil Engineering.
- At least 3 years' post-qualification experience in the residential infrastructure sector.
- Proven experience in the development and detailed design of roads, external works, and drainage schemes.
- Strong knowledge of relevant UK policies and design standards, including DMRB and Sewers for Scotland.
- Experience designing adopted drainage and highways, with the ability to manage multiple projects and meet programme deadlines.
- Proficiency in AutoCAD, PDS/Site 3D, and MicroDrainage/Flow (or equivalent design software).
- Excellent written and verbal communication skills.
- A full clean driving licence.

## **What We Offer**

- The opportunity to help build and develop our Roads and Sewers team.
- Clear progression opportunities for the right candidate.
- A competitive salary commensurate with skills and experience.
- An office-based role with consideration for flexible/hybrid working arrangements.
